| Description | <p>ACOPOS servo drives use the information on the motor's embedded parameter chip, which contains all relevant mechanical and electronic data. The work-intensive and error-prone task of manually setting parameters is no longer necessary and start-up times are substantially reduced. During service, relevant data can be requested and the cause of any problems that may exist can be determined.</p> <p>The ACOPOS servo family is also available with partially-coated circuit boards. These versions have identical specifications but are more robust in regard to environmental influences such as dust, aggressive vapors or moisture.</p> |
