### Product Description

The Guard Locking Proximity (GLP) inputs special-purpose safety relay is designed to use proximity sensors to detect the safe speed of a machine. The GLP safety relay issues lock or unlock commands to a guard locking interlock, which are based on the speed of the signals that the proximity sensors emit. The GLP safety relay has three rotary switches for you to set its configuration. A logic switch sets the functionality. Two other switches set speed limits and time delay: Switch SLS1 sets the safe limited slow speed. Switch SLS2 sets the Safe Maximum Speed limit, or a percentage of the timing range.
