Product Description

Product Description

ABB PM862K01 AC 800M Processor Module

Technical Application

The AC800M controller is a series of guideway mounted modules, including the CPU, communication module, power module, and various accessories. There are several CPU modules to choose from, with varying processing power, memory size, and redundancy support. Each CPU module is equipped with two Ethernet ports for communicating with other controllers. There are also two RS-232C ports for point-to-point communication between the CPU and programming/debugging tools, as well as third-party systems and devices.

The base plate of the PM856A controller has two RJ45 Ethernet ports (CN1, CN2) for connection to the Control Network, and two RJ45 serial ports (COM3, COM4). One of the serial ports (COM3) is an RS-232C port with modem control signals, whereas the other port (COM4) is isolated and used for the connection of a configuration tool.

Simple DIN rail attachment / detachment procedures, using the unique slide & lock mechanism. All base plates are provided with a unique Ethernet address which provides every CPU with a hardware identity. The address can be found on the Ethernet address label attached to the TP830 base plate.
