Product Description

Product Description

Honeywell FC-SAI-1620M Safe High-Density Analog Input Module

Technical Application

The function of the termination board and the connector pin assignment are exactly fitted to the requirements of the Honeywell system.

The signal is output to the safety instrumented system via the system connector. Information about a missing supply voltage of the isolated barriers is available for the system as a volt-free contact.

Wiring faults from the field side will be reported via the same relay contact, if this function is supported by the isolators.

The termination board has a robust plastic housing.

The termination board is mounted in the switch cabinet on a 35 mm DIN mounting rail according to EN 60175.
