Product Description

Product Description

HONEYWELL CC-PAIM01 51405045-175 HIGH LEVEL ANALOG INPUT MODULE

Technical Application

The CEEC300 block provides an execution and scheduling environment in which Control Modules (CMs) and Sequential Control Modules (SCMs) execute userconfigured control strategies. Existing control strategies can be ported to a C300 controller, although manual editing of these strategies is required to support the C300 controller configuration. The CEEC300 block contains a peer-to-peer communications layer which is used to communicate between other controllers.
Two IOLINK function blocks, which represent the 2 physical IO links on the C300 Controller IOTA, provide the user-configured I/O Link interface to support communications with Series 8 I/O modules. Each IOLINK is configured to support Series 8 I/O modules or 'No Link' if no I/O control is required. Each IOLINK supports redundant and non-redundant communications.
The C300 Controller supports Series 8 I/O modules. Series 8 I/O modules are connected to the C300 by a pair of I/O Link Interfaces. Two IO Link interfaces, which are redundant, provide connection between the C300 controller and associated I/O modules. Each IO links can be configured to support Series 8 I/O modules. Refer to the Series 8 I/O User's Guide for listings of the supported I/O modules.
