## Product Description

### Product Description

Emerson VE4022 DeltaV Profibus DP Interface Module

### Technical Application

A DP slave is a peripheral device (I/O device, drive, HMI, valve, etc.) that collects input information and sends output information to the master. There are also devices that supply only input or only output information. The amount of input and output information depends on the device type. A maximum of 244 bytes of input information and 244 bytes of output information is permitted per slave.

Traditional I/O is a modular subsystem that offers flexibility during installation. It's designed to be installed in the field, near your devices. Traditional I/O is equipped with function and field wiring protection keys to ensure that the correct I/O card is always plugged into the corresponding terminal block. Modularity, protection keys, and plug-and-play capabilities make DeltaV™ Traditional I/O a smart choice for your process control system.
