Product Description

Product Description

FOXBORO FBM204 P0914SY DCS I/O Module 4 Channel

The FBM204, 0 to 20 mA Input/Output module contains four 0 to 20 mA dc analog input channels and four 0 to 20 mA dc analog output channels.

Each input channel accepts an analog sensor input such as a 4 to 20 mA transmitter, or a self-powered 20 mA source. Each output channel drives an external load and produces a 0 to 20 mA output. The inputs/outputs are galvanically isolated from other channels and ground. The FBM204 performs the signal conversion required to interface the electrical input/output signals from the field sensors to the optionally redundant fieldbus. The FBM204 executes the Analog I/O application program, which provides the following configurable options: Conversion Time, Fail-Safe Configuration (Hold/Fallback), and Analog Output Fail-Safe Fallback Data (on a per channel basis). When used with I/A Series® software v8.6 to v8.8 or Foxboro Evo™ Control Core Services software v9.0 or later, the FBM may instead execute a distributed PIDA (DPIDA) application program to provide a fast control loop running in it. The FBM204 is electrically compatible with standard HART signals.

Technical Application

1. Power industry, the elevator industry, parking, automobile, auto ancillary.
2. feed industry, aluminum smelting machines, refrigeration industry.
3. steel industry, combustion control systems, non-ferrous metal smelting.
4. glass industry, construction machinery, textile machinery, water treatment
