Product Description

Product Description

FOXBORO P0973BP DCS INTERFACE CHANNEL ISOLATED 8-INPUT MODULE

The Compact FBM203/c/d Platinum/Nickel/Copper RTD Input Interface Modules contain eight resistance temperature detector (RTD) input channels. Each input channel of the Compact FBM203/c modules accepts a 2- or 3-wire RTD sensor input, within a 0 to 320 ohm (FBM203), or 0 to 30 ohm (FBM203c) resistance range. Each input channel of the Compact FBM203d accepts a 4-wire RTD sensor input, within a 0 to 320 ohm resistance range. Each analog input is galvanically isolated from other channels and ground. It is part of the Compact 200 Series I/O subsystem described in Compact 200 Series I/O Subsystem Overview (PSS 41H-2COV). The modules perform the signal conversion required to interface the electrical input signals from the field sensors to the optionally redundant fieldbus. The Compact FBM203/c/d modules execute an analog input application program, which provides conversion time (on a per module basis) and configurable options for Rate of Change Limits.

Technical Application

2. Feed industry, aluminum smelting machines, refrigeration industry.
3. Steel industry, combustion control systems, non-ferrous metal smelting.
