Product Description

Product Description

TRICONEX 3005 ENHANCED MAIN PROCESSOR (UMP) MODULES

Technical Application

TRICONEX 3005 An indexing system is a category of controller used for simple position or velocity control with very few if any other features. Indexing systems for the most part have no (or very limited) acceleration control, which limits TRICONEX 3005 the number of set speeds and types of acceleration that can be employed. The key feature of the indexer is that they are very inexpensive, as they typically consist of a microprocessor with a limited amount of code. TRICONEX 3005 These simple systems have become very popular in the hobby and maker markets due to the availability of open-source software, which has made indexing a project easy.
